Abstract

The invention relates to a driver's cab (1) for an individual driver. In order to provide a comfortable rest zone with an easy chair (2) and reclining surface (32) for a driver, even in a confined space, provision is made for the driver's cab to have an easy chair (2) which can be converted into a bed. In this arrangement, a mattress (31) runs over the armrest (25) having an armrest cushion (26) of the easy chair (2). The armrest cushion (26) cushions the reclining surface, so that the mattress (31) is of as space-saving a design as possible.
